

DIGITAL DIODE DISPLAY STRIPS FOR RETAIL

SO MUCH TIME IS WASTED SCANNING/ENTERING, PRINTING LITTLE TICKETS AND THEN PLACING THEM IN TO PLASTIC DISPLAY STRIPS (WHICH BREAK AND FALL OFF ANYWAY).

WHY NOT MAKE THE PLASTIC STRIP AN ELECTRIC DISPLAY WITH A POSITION NUMBER CONTROLLED FROM A CENTRAL DATABASE. IT SHOWS NOT JUST THE TICKET BUT EXTRA INFO LIKE: 'ON SALE'; 'REDUCED'; OR, A FLASHING SOMETHING THAT SENDS THE SUBLIMINAL "I'M RIPE FRUIT ... PLLLLLUCK ME"
